

Step-by-Step Technical Guide: Deploying Active Directory Domain Services (AD DS) on Windows Server 2019 Using Hyper-v Lab

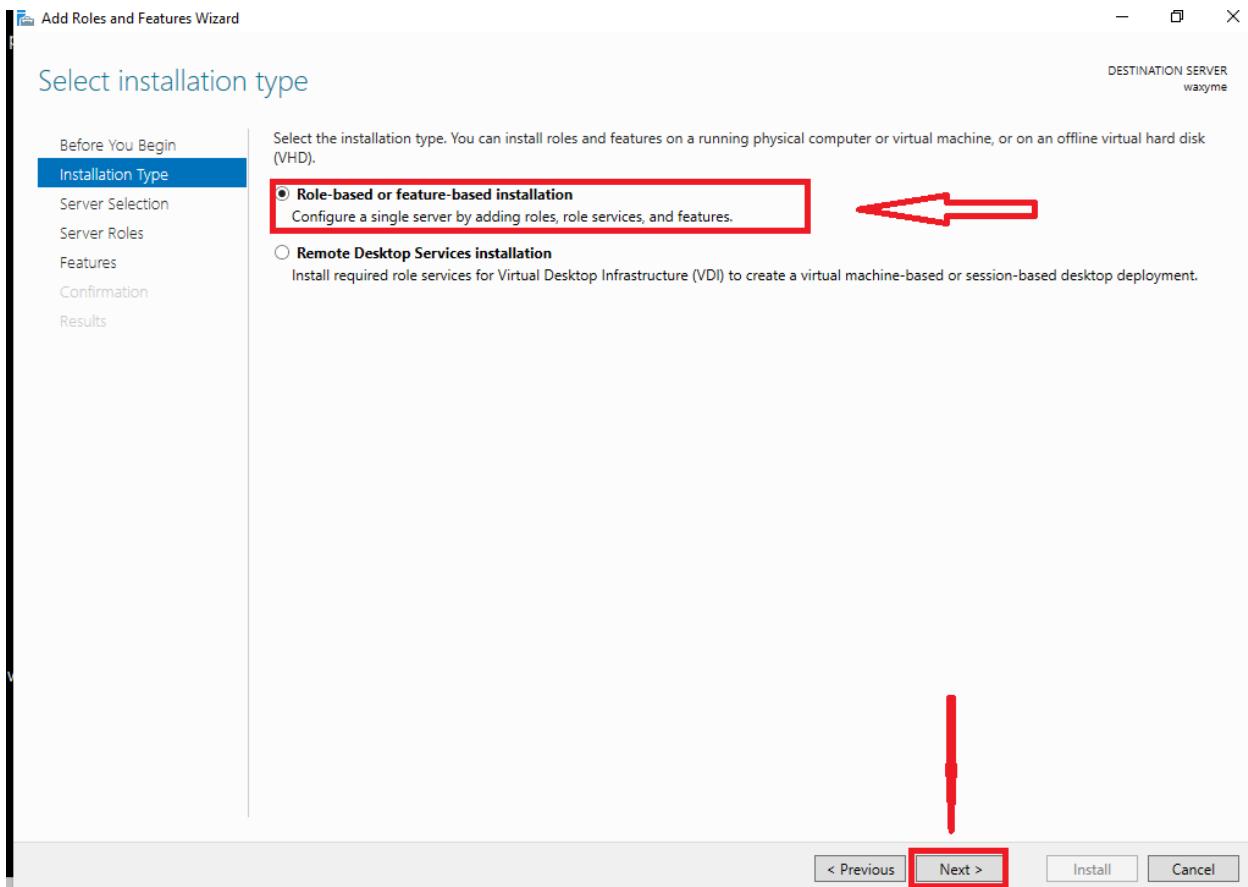

1. Installing the AD DS Role:
 - open your server manager
 - select - Add Roles and Features

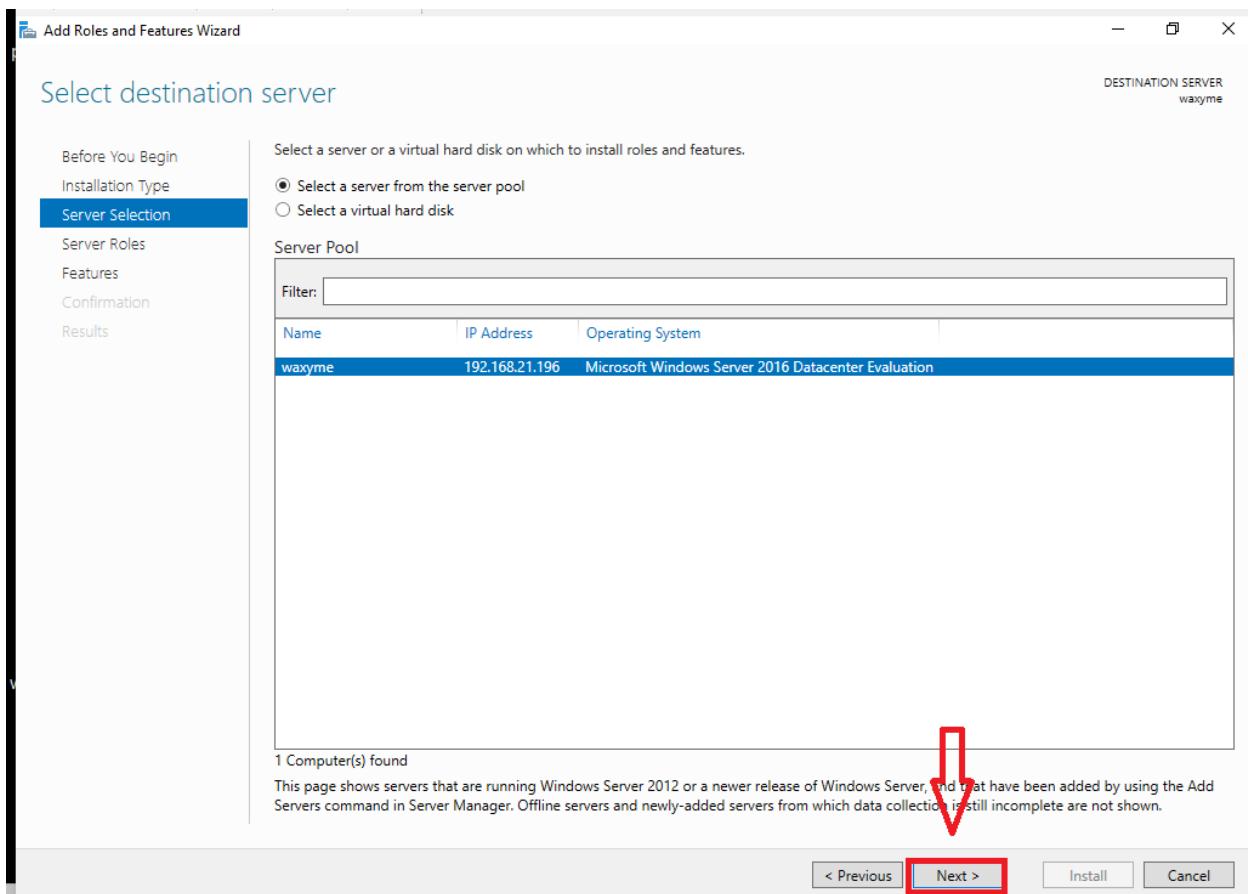

→ In the Wizard- click **Next**

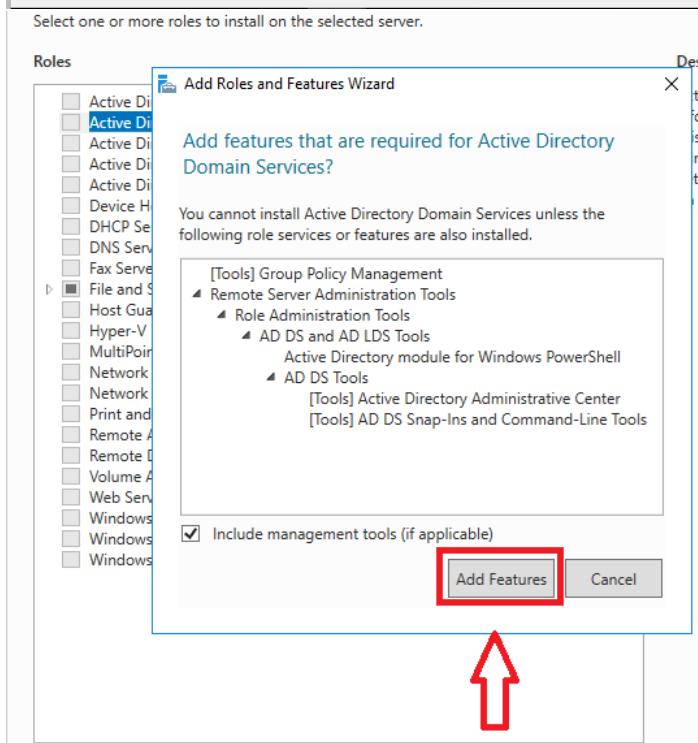

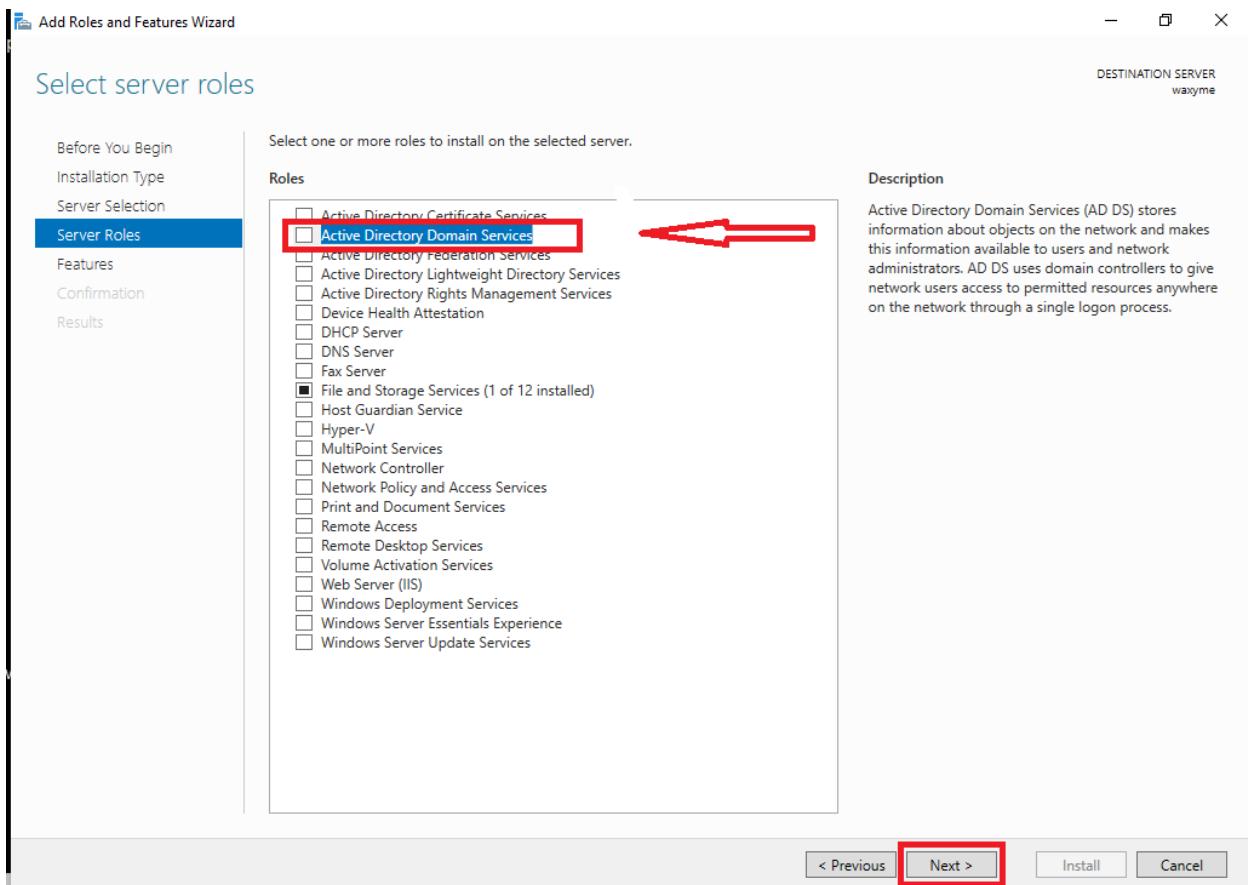

→ select **Role-based** or **Feature-based** and click **Next**

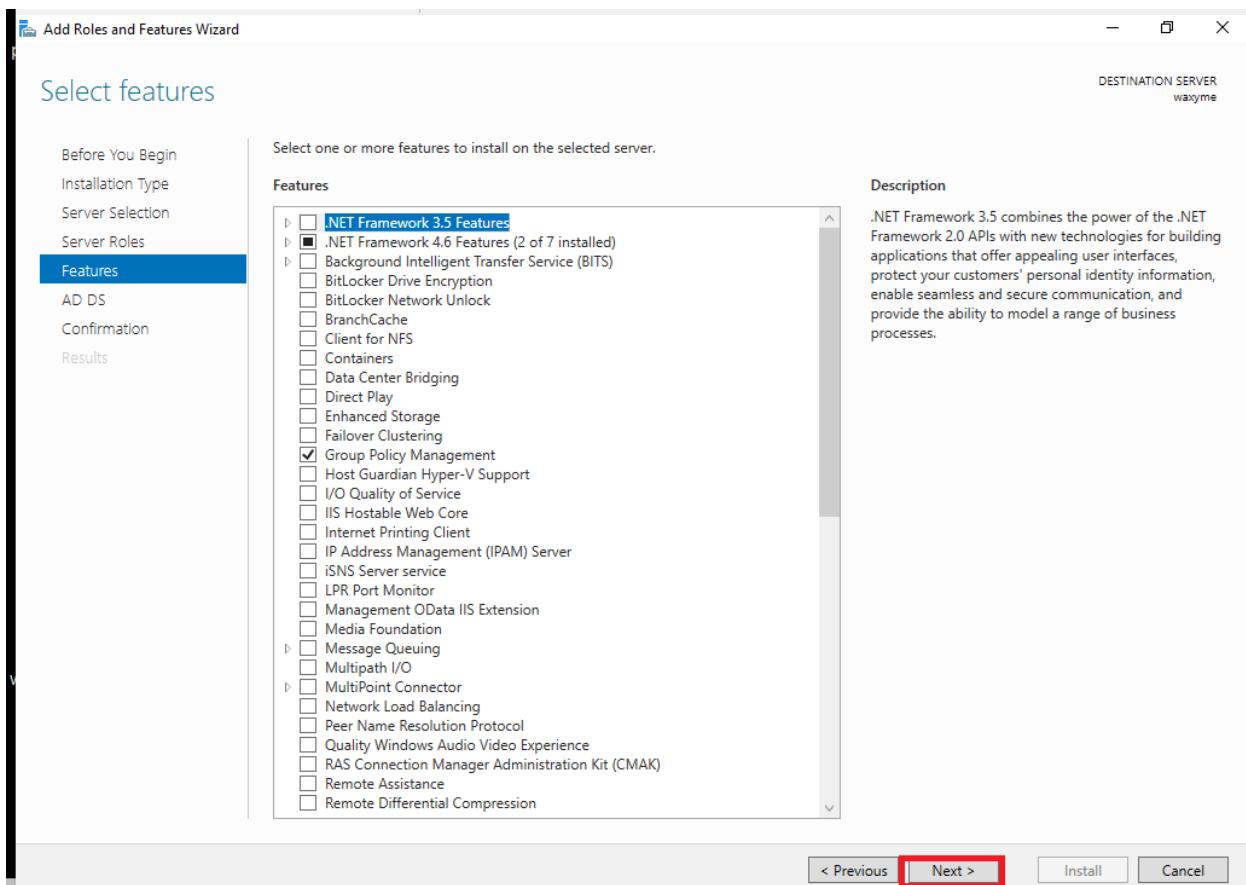

→ choose your **local server** and click **Next**

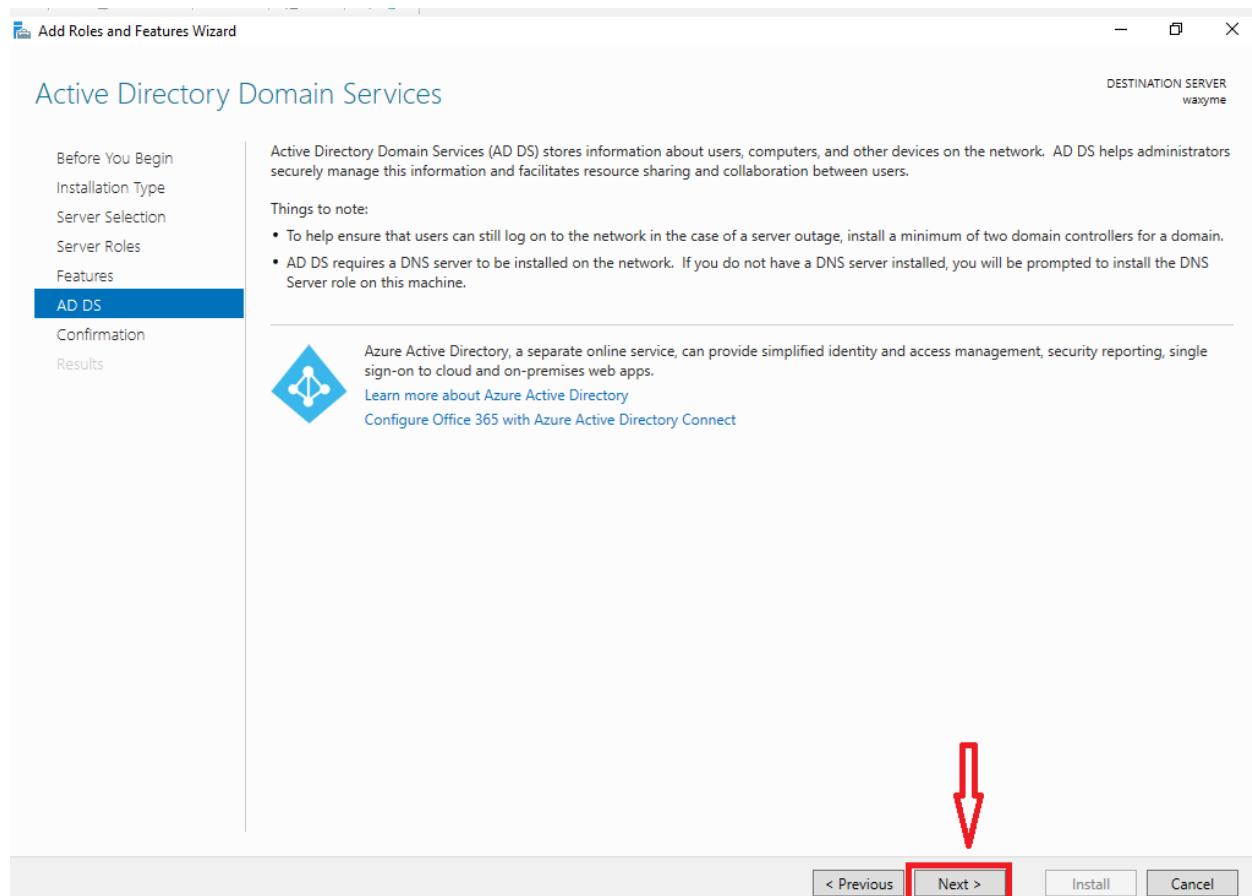

→ select **Active Directory Domain Services** and click the **Add features** console, after which you click **Next**

→ Accept defaults, ensure **Group policy management** is included, and click **next**

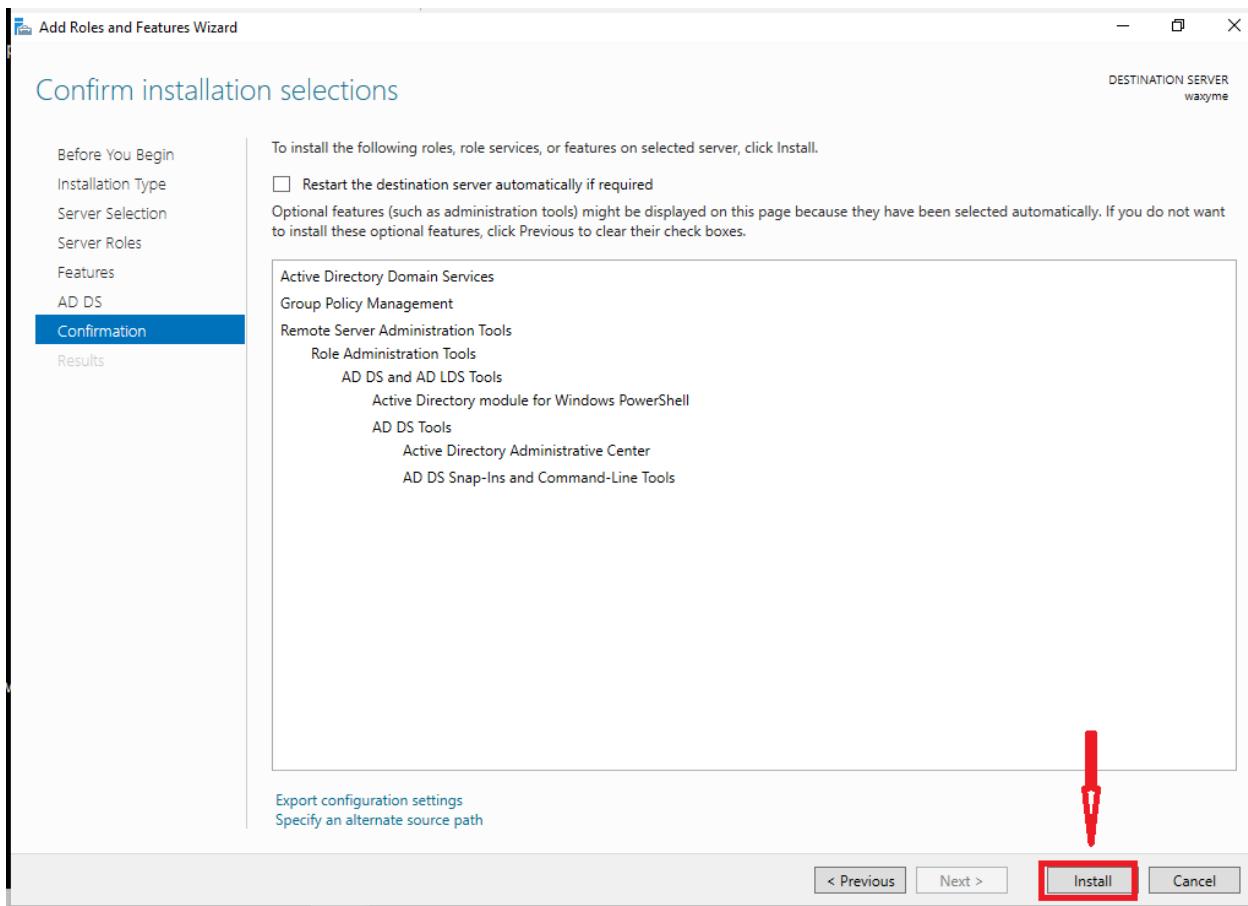

→ Click **Next**

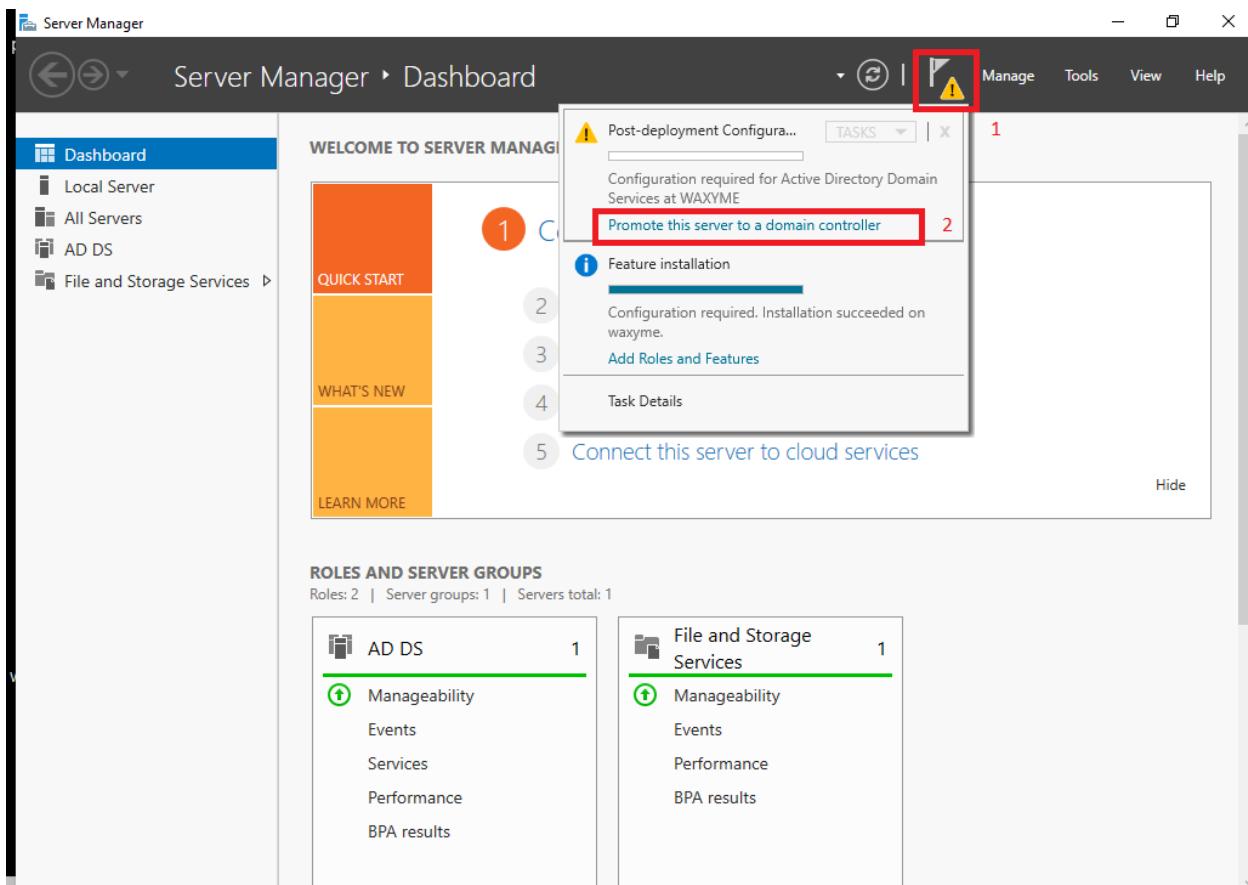

→ Click **Install**

This Installs only the AD DS binaries but doesn't configure the domain yet.

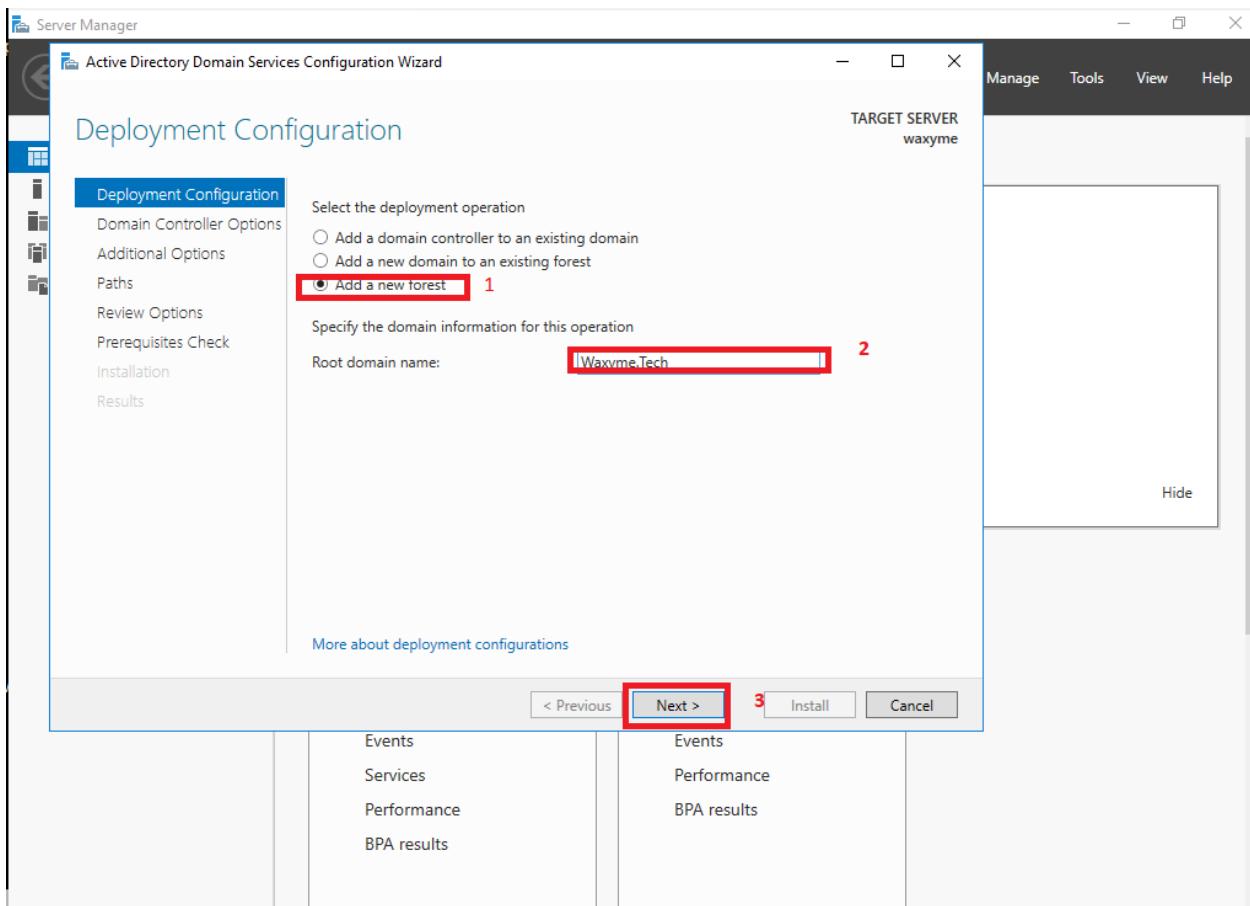

2. Configuring the Domain:

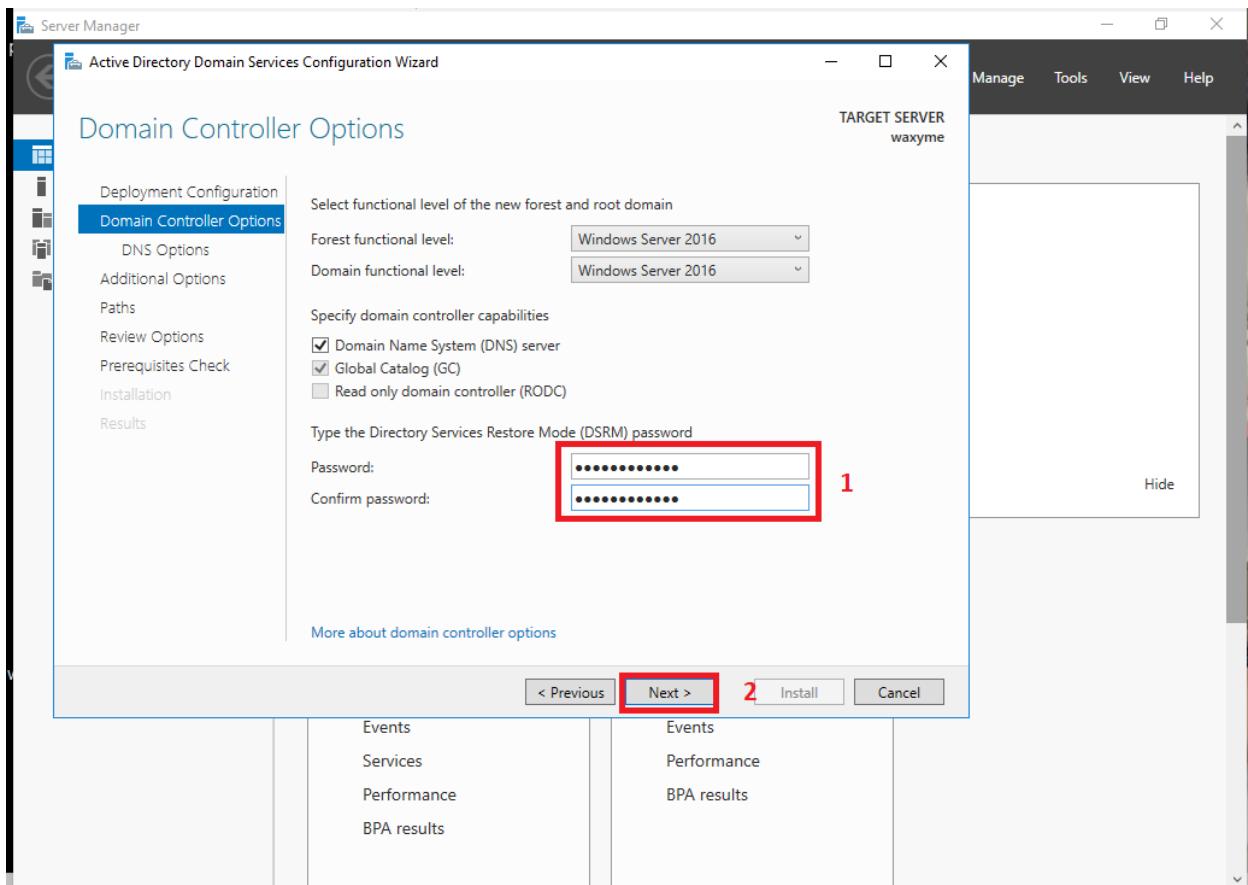

- In the Server manager, click **promote this server to a domain controller** at the top right side of your server manager where you have the flag sign.

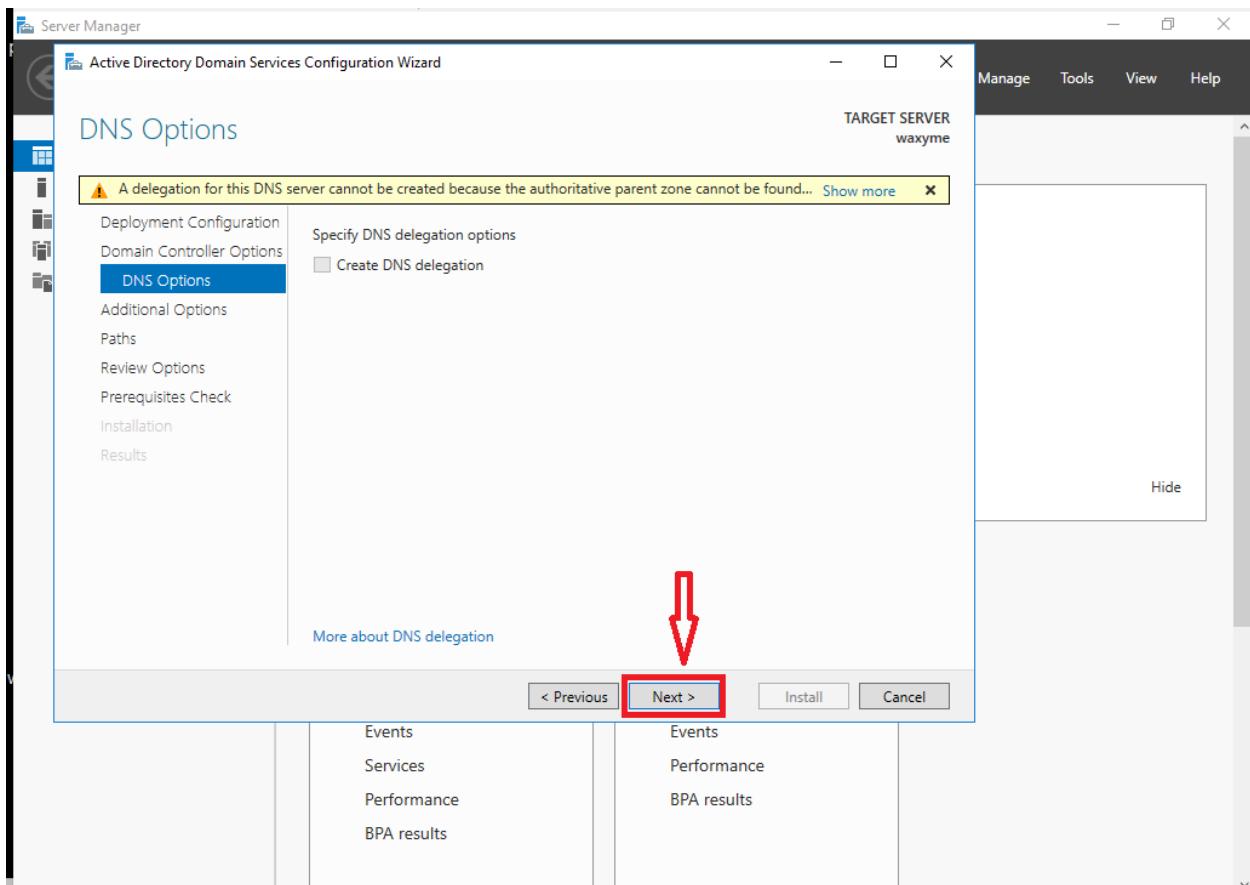

→ Create a new forest: **Waxyme.Tech**

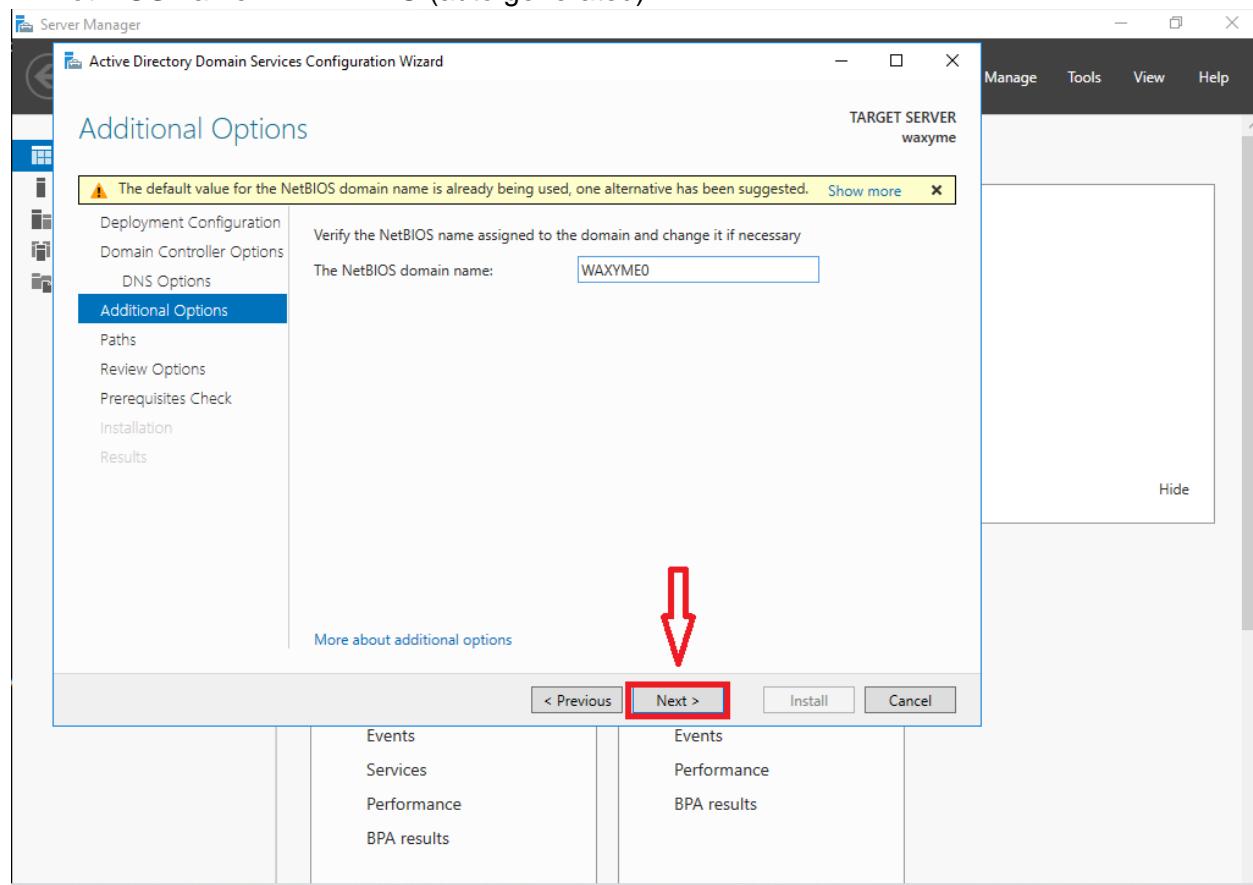

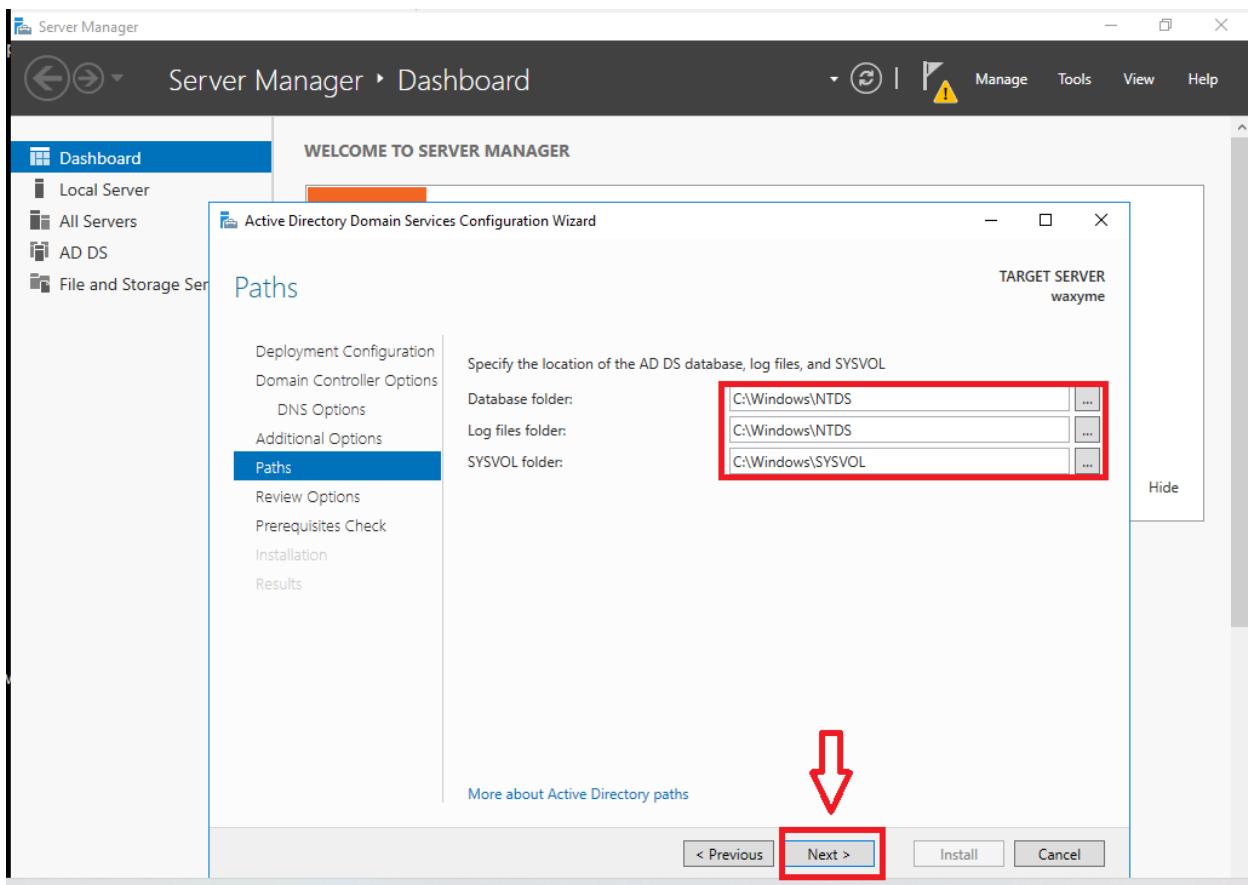

→ set **DSRM** password for recovery

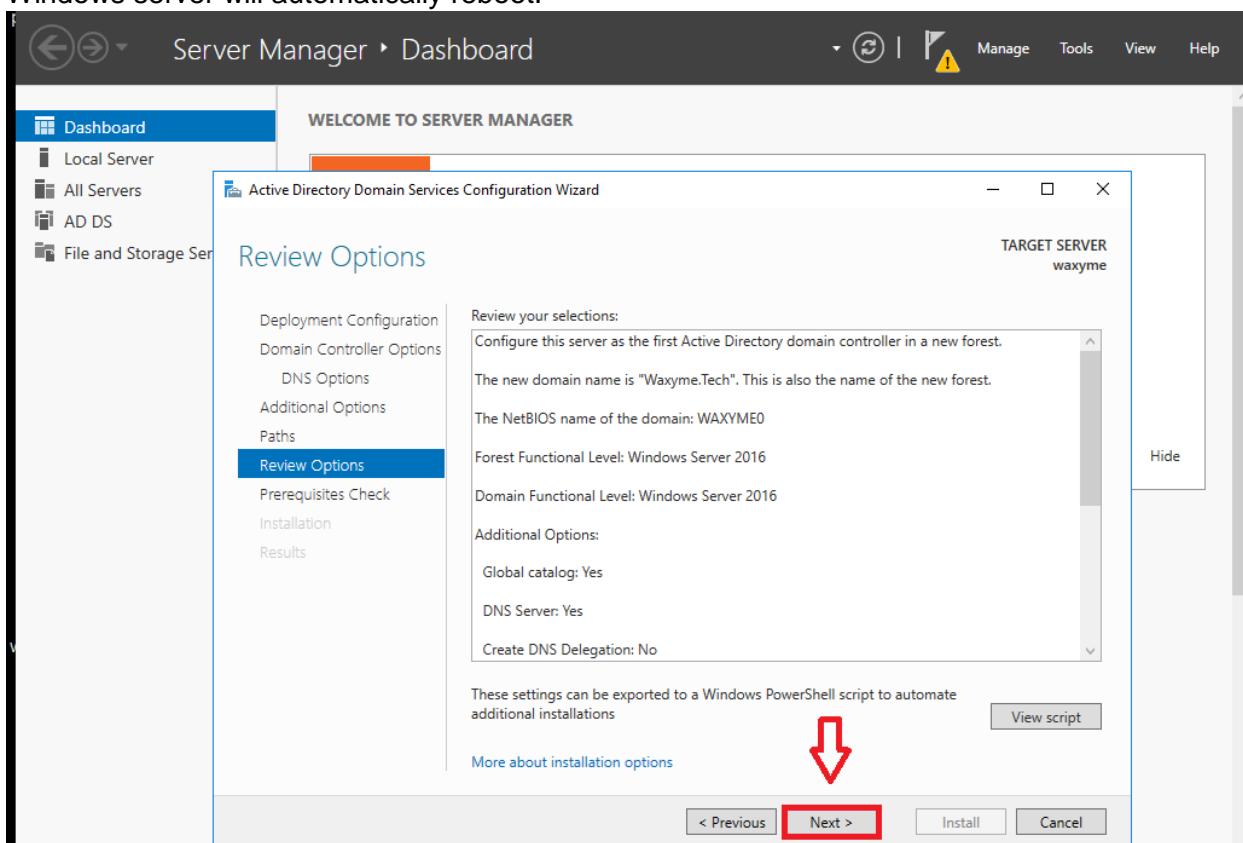

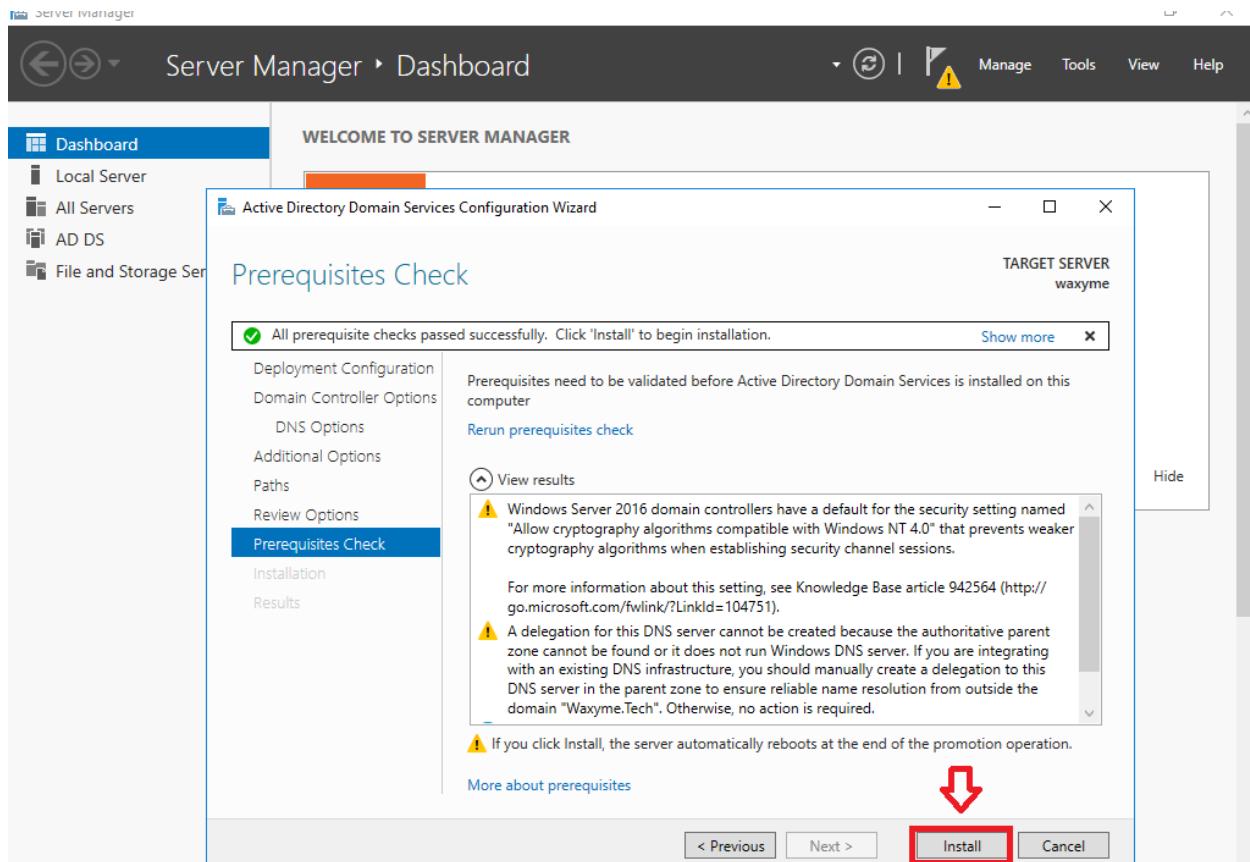

→ NetBIOS name: WAXYMEO (auto generated)

→ Select Next and Next to Review Prerequisites Check, and then select Install, and the Windows server will automatically reboot.

3. Check and Verify Configuration:

- Login using Domain Credentials
- Open Active Directory Users and Computers to verify Domain Setup
- Verify DNS Registration
